Head of Creative Design • **Media Content Development** • *SharnyP!*

September 2022 – March 2023

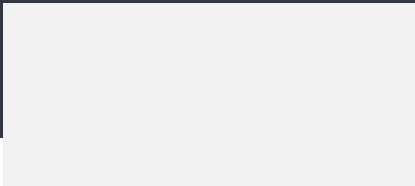

Full-Stack Development • **Website Development** • *Fiatci.io*

SOFTWARE ENGINEER

As a software engineer, I have experience with Software Development and Mobile App Development. I also have extensive experience and a career preference of Full-Stack web development. However, I am still early in my career path, and am excited in continuing to build on my craft and find new passions within the field of computer science.

LEADERSHIP

I currently use my strong analytical, critical thinking, problem solving skills, and passion to help others to tutor my classmates in our studies up to date. My ability to understand previously presented material and thoroughly consume and effectively apply the current material makes me a beneficial asset to my course mates, and my professors, as I often advocate for the mates I support. A set of skills I intentionally transfer over into my work ethics.
